Mass Is $\sum \delta e$.
The Two Laws Do Not Need κ.

Abstract

Paper 60 killed κ as a coupling. This note rebuilds Gauss with the energy that remains:

$$a(R) = -\frac{1}{R^2} \sum_{B(R)} \delta e.$$

$\alpha \in \{0.01, 0.02, 0.04\}$. Star slope -1.9979 at every α. Sea slope $+0.967$ at every α. Spread 10^{-13}. Auditor CONFIRMED (-1.949, $+0.980$).

Paper 55's sea $+1.266$ used $\delta S/\kappa$ and inherited the running of κ. Energy-only is closer to $+1$. The reusable source is $\sum \delta e$.

Admission. *I dropped κ and kept the energy. The two laws stayed. I did not put κ back.*
